

# Automated Online Research

**NAVAERA ON-DEMAND ONLINE RESEARCH** provides automated access to a vast catalog of stored data gathered from local, national and international media and other electronic sources as well as published documents from journals, agencies and governmental sources.

Access to critical facts, figures, records, statistics, alerts and breaking news keeps organizations ahead of the curve and enables them to anticipate risks and make informed decisions.

Navaera On-Demand Online Research is a reference resource that provides automated access to a vast catalog of news articles, reports and intelligence from diverse sources. The service delivers information quickly and securely with automated access that enables advanced analysis of data gathered from local, national and international media and other electronic sources as well as published documents collected from journals, government agencies and other sources.

The service easily accommodates complicated search criteria and continuously combs for reports of negative incidents or specified names or occurrences providing a comprehensive 360-degree view that allows users to connect the dots that relate to events, individuals, incidents and occurrences.

Navaera On-Demand Online Research is a superior research service:

- The service provides continuously updated content from over 4,000 sources, including archived news articles and published documents;
- It provides both online and API access;
- Navaera's programmable toolkit enables users to access unstructured content automatically using key words and key themes; and
- The database has functionality that enables users to execute complicated searches using complex search criteria.

Secure access to critical data has implications for governments and virtually all industries for purposes of trading, risk management, identity verification, strategic planning, market analysis and incident awareness. Navaera Online Research is designed to cater to user needs and types of information required for optimal research, compliance, identity verification, fraud detection and strategic decision making.

Knowledge is the power that enables organizations to detect and prevent financial crime, mitigate risk, deter threats, achieve regulatory compliance, improve operational efficiencies and enhance profitability. Having precise, relevant, up-to-the minute data enables organizations to be proactive in the face of dynamic world events.
