# EnScreen ADX

**ENSCREEN ADX** is a high performance data analytics platform that facilitates complex analytics involving large volumes of stored data and enables organizations to perform batch data analysis quickly and efficiently.

Today's organizations accumulate massive amounts of data from a variety of sources and in a variety of formats. Mining this data and transforming it into knowledge enables organizations to derive insights that form a basis for strategic decision making. EnScreen ADX is an automated data analysis solution that enables enterprise organizations to execute advanced data analysis and find correlations or patterns that turn it into useful, evidence-based knowledge which can fuel smart decision making.

A high performance batch data analytics platform, EnScreen ADX enables users to develop and execute complex analytics tasks involving large volumes of stored data.With its sophisticated and structured framework, the system streamlines the development of data mining models that perform batch data processing and analytic functions quickly, accurately and efficiently.

Within EnScreen ADX, developers can develop, execute and schedule advanced, high performance analysis and interrogation processes that reveal historical patterns and future trends, information that can be used to increase revenue, manage risk, reduce costs, and more.

- The solution enables mining and analysis of data from many different sources;

- It provides a comprehensive framework for customizing batch data processing applications, including the ability to enhance and add structure to source data; and

- The application contains scheduling functionality and can be used on a variety of operating systems including Microsoft Windows®, Linux, Unix, or Solaris©.

In today's world, data is abundant. The challenge is how to think about it, how to understand what it says about your customers and what it means for your organization – and to use it gain insights that can inform intelligent decision making. EnScreen ADX is a powerful analytics solution that can unlock the potential of data in your organization.
